HYBRID TRADING PANEL

By EliteIT4U Team

User's Manual

http://www.hybtrader.com
ALL FOREX PAIRS & ALL TIME FRAMES

Installation and Setup. **MetaTrader 4 Client Terminal**

"You should save your Indicator in the specific folder location, which is: "MT4 > File > OpendDataFolder > MQL4 > **Experts**"

<mark>LETMEHELPYOUTOFINDTHISNEWFOLDER:</mark>

Start MetaTrader4. Select File in the menu, <mark>OpenDataFolder.</mark>

You will be in a special MT4 folder: its name may vary depending on your broker. But that's the folders you will see:

Open MQL4 folder – check the picture in the middle. Here you will find <mark>Experts</mark> folder: Copy and paste panel inside <mark>Expertsfolder.</mark>

<mark>Now RESTART MetaTrader4.
The files will appear under Navigator list.</mark>

The Navigator panel displays all the accounts, indicators, expert advisors and scripts available to you. If you followed the simple instruction above, you should see H-Trader in Experts.
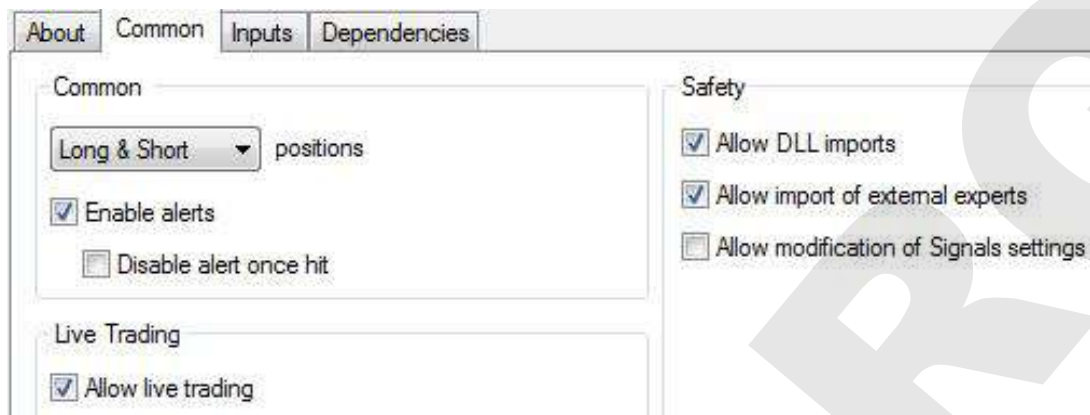

If you don't see it there, please make sure you have placed the file in the correct folder, as described above. Relaunch MetaTrader4andcheck it onceagain.

If it is still not listed there, contact our technical support by sending an email to:
denmurakami@gmail.com

<mark>VIDEOGUIDE:</mark> https://www.youtube.com/watch?v=ScSj-RLp6Mw
Open ANY chart and drag panel there.

A window with the settings appears. Open Common settings and enable Live Trading and DLL imports. It is required for Auto Trade option. Please, make all the settings in the "Common" tab the same as below.

Then switch to **Inputs** settings. These are variable parameters

## Click OK. ALL OTHER OPTIONS ARE ACTIVATED PANEL

After you install it, you will need to get KEY from me. Check the PC CODE that appears after the installation and send it to me directly to

denmurakami@gmail.com
I will generate you a key. When you get the key, insert this key into PC CODE field and press enter. Yes, right on the chart: enter the key, double click and   press Enter.

## Click OK and then indicator will start work and show all details!

Important note: you can hide each panel in one click. EASY. This help you to have all options at one panel, but still save your chart's space.

Save your chart from useless information. EASY!!!

Let's focus on each panel.

PART 1. Smart options:

1. Pair: you can add any other pair on current chart. The list of pairs come from Market Watch MT4. If you want to compare pairs on same chart - this is the best way... want to find correlation between pairs - easy.

2. Time Frame: as soon as you add extra pair on current chart, you are able to chose TF of that pair too. Also, you can add same pair and chose higher TF. Then you will be able to see visually upcoming trend right on the chart. EASY.

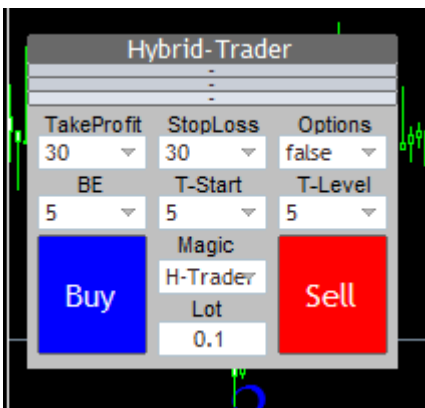

3. Classic: you can add 3 classic indicators on the chart: Stochastic (STH), RSI, EMA. They have

common settings and show up(blue)/down(red) or grey (middle). You can see trend direction by classic tools on M15 to H4 time frames. This will help you in decisions too. Also, by personal request we will issue a version where you will be able to set own settings for each classic indicator.

4. Scripts buttons: by using these 3 buttons you will be able to close orders on current pair by one click. You can close all or profit/loss orders. Easy.

PART 2. Trading options:

1. Buy/Sell: You may open Buy or Sell order by clicking this button. When you click it, a new instant order with a specific Magic Number is placed. This way H-Trader does not affect other manual orders that usually go with zero magic numbers.

2. Lot size, Take Profit, Stop Loss: Basic options for trading are placed within a single panel so you can control it at any time. You don't need to go to Inputs of the indicator as they are all here, at a chart. You set here Take Profit, Stop Loss values, Lot Size. In addition, you may set here Breakeven and Trailing Stop Loss if needed.

✓ **Take Profit**: target profit in Pips for auto TRADE/ manual orders if support
✓ **StopLoss**: max possible loss in Pips for auto TRADE / manual orders if support
✓ **Lot**: lot size for auto trade option

Smart Stop Loss/Take Profit: if you chose SMART in TP and SL, it will use previous 25 bars for important levels and calculate SL/TP based on it. Anyway, There are some limits there... Take Profit won't be more than 100, less than 20. Stop Loss will be 80 Pips max, 30 Pips min. Always, TP will be higher than Stop Loss.

3. Options: you can add trailing Stop Loss and BreakEven for trading. Chose BE(BreakEven) or TrailSL(Trailing Stop Loss) or both BE/TSL.

✓ **BE**: value of profit in Pips when you want to move Stop Loss to +1 Pips
✓ **T-Start**: trailing SL start point, in Pips.
✓ **T-Level**: distance between trailing SL and price.

Easy to calculate: If you have T-Start 5 and T-Level 5, means that at +10 Pips profit, SL moves to +5 Pips(Start) and follow the price on +5 pips distance(T-Level). Each 1 Pips.

4. Magic: H-Trader means that indicator won't manage all manual orders. It will manage just AutoTrade orders and manual orders made from the panel. But it won't manage all manual orders. If you make it ALL - this indicator will manage all manual/AutoTrade orders.

TIPS ON MANUAL ENTERING

You may enter when you see a relevant signal. For extra safety you may also check higher TF signal and time of news releases. Do not trade at weak market.

PROFITTIP№1:BREAKEVEN/TRAILINGSL

Activate BreakEven at 7-10 pips profit level. It helps to secure almost every order! Use Stop Loss and Take Profit that is relevant for the selected timeframe. If you manage fast orders you can reach an extremely high win/loss ratio of about 75% and up to 90%. That's why we added auto TRADE feature. Please use it for the instant auto entry!

PROFITTIP№2:NEWS-BECAREFUL

Nowadays there are lots of web resources that offer news on upcoming economic events. You know how strong a news impact can be. It can ruin any order or bring a sudden luck. But we do not recommend taking such risks unless you are a devoted news-trader. It is better to skip high-impact news, so please follow economic calendar!

MoneyManagement

Money Management in a single rule: Risk >>> Stop Loss >>> Lot size.
Risk 1-3% of your deposit per trade. Decide on a risk and based on price action, set a Stop Loss. Now, calculate your Lot size volume that would match with your risk.
For example: your stop loss is 10 pips, and your equity is 10,000$. You wish to risk 2% of your equity in this trade, so you enter trade with 2 lots – so your risk is 200$, or 2%.
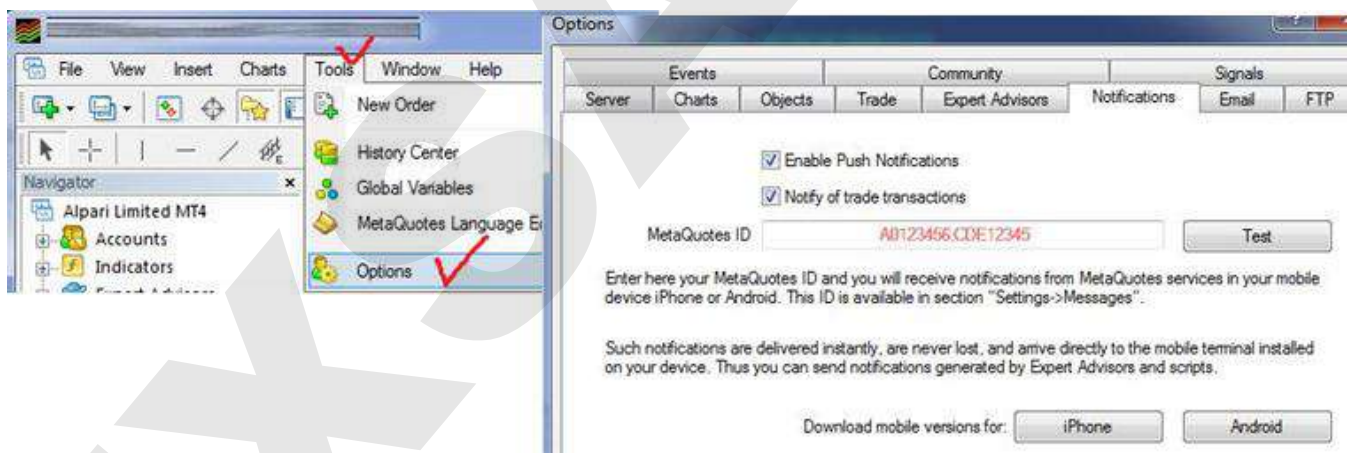

PUSHUPNOTIFICATIONS

PUSH UP NOTIFICATIONS: on your Android & iOS device.
#1 You should find your "MetaQuotes ID"

Download MT4 for your mobile device and come to "Settings" and choose "Messages". You will see "MetaQuotes ID" and code. Use this unique ID with your client terminal.

## #2 Launch MT4 on your PC, click Tools – Options and past the code there.

When you inserted your "MetaQuotes ID", click Test.

It will generate a test message to your mobile device. Please, take a look in the "Journal" to confirm the notification was sent. If set up properly, you will receive a notification in your status bar and in the "Messages" area of MT4 Mobile.

Now, you can set up personal notifications as well: Open Alerts tab of your MT4 terminal. Click on the white space and select CREATE. Now create your own notification.

EMAIL NOTIFICATIONS:

Click Tools – Options, select Email tab.

Setup your SMTP local servers, email username, password to receive instant alerts with all levels and signals via email.

Useful Trading Notes:

Trading is a habit. When you start trading you try different strategies, pairs, timeframes and finally end up at scalping or day-trading or news trading, just add your own style to the list. Each trader is unique but all traders should follow Forex logics otherwise they risk to lose a deposit sooner or later. Let me remind you how to form a healthy trading style.

☑ Idea of trading.

Do not trade with last money; do not put all your savings in it. **I believe that somewhat about $200-300 is good enough for a start.** So, do not focus on trading as your daily obligation. You need good market conditions, if you miss the signal, do not go in, skip it, wait for the next signal! Don't force the market, it will not adapt to your orders…

☑ Turn Force majors into advantages.

News impact may be disastrous if you ignore economic events calendar. Check it and get ready – close or open orders depending on your needs. I would rather close… But most traders are so much deep in thoughts with stop losses and profits that they just forget about news.

☑ Double stop to potential losses: Stop Loss. BreakEven.

No matter how wonderful our system is, it is the manual system. It gives signals, but it is you who compare them with market reality, check filters and select Stop Loss, Take Profit. Security must be your primary task. **We have tried to eliminate almost all false signals**, but if you start trading before news or forget about Stop Loss, our system will be not really responsible for it. So please ALWAYS mind the safety of your deposit. Do not set high lot sizes and use all filters available. Don't place an order if you are not sure about it.

☑ Pairs: more charts don't mean more money

It works with all major pairs. We optimized it per each major pair and are sure that it will give great signals. But each signal needs to be accompanied by a trader: checking filters, setting up Stop Loss and so on. **Please do not rush into 5-6 charts trading;** it is a challenge even for experts with great experience. 1-2 major pairs are perfectly enough for making a steady daily gain. You may switch to the most active pair according with the active session and take one more that correlates with it.

Feel free to ask me anything you need. I will be glad to help you at any time.
